

# Title Page

**Journal:** Frontiers in Signal Processing

**Specialty section:** Biomedical Signal Processing

**Article type:** Original Research

**Title:** Self-supervised biomedical signal representation learning from intrapartum cardiotocography for neonatal risk enrichment

**Running title:** Self-supervised CTG signal representation

## Authors and affiliations

### 2. Kaisi Zhu

Email: chzks6768@163.com

Affiliation: Department of Anesthesiology, Changhai Hospital, Naval Medical University, Shanghai 200433, China

### 3. Ziyi Jiang

Email: 15821623673@163.com

Affiliation: Department of General Internal Medicine, The 929th Hospital, Affiliated with Changhai Hospital, Naval Medical University, China

### 4. Feifan Lu

Email: luff94@163.com

Affiliation: Department of Obstetrics and Gynecology, Changhai Hospital, Naval Medical University, Shanghai 200433, China

**Equal contribution:** Xiaoqian Gui, Kaisi Zhu and Ziyi Jiang contributed equally to this work.

**Corresponding author:** Feifan Lu, Department of Obstetrics and Gynecology, Changhai Hospital, Naval Medical University, Shanghai, China. Email: luff94@163.com

**Keywords:** cardiotocography, biomedical signal processing, self-supervised learning, time-series representation learning, fetal heart rate, uterine contraction, neonatal risk, calibration

**Funding:** This work received no external funding.

**Conflict of interest:** The authors declare no competing interests.

**Ethics statement:** This study used publicly available, de-identified datasets and did not involve direct recruitment of human participants.

**Data and code availability:** Public datasets are available from their original repositories. Derived source-data tables, supplementary tables, analysis code and manuscript source files are archived at <https://doi.org/10.5281/zenodo.20484443> and <https://github.com/Luciky-Leo/ctg-foundation-trajectory>.
